

B6-S INSTALLATION INSTRUCTIONS

Installing the Sunburst Pediment Head: The Sunburst Pediment Head is designed to accommodate two types of entrance openings such as 1'-0"x3'-0"x1'-0" or a 5'-4 1/2" double door and astragal. The overall height and length of the Sunburst Head is 16-0" x 72-3/4" the thickness is 1-7/8".

The Sunburst Head is designed to mount over a top shelf or frieze board. The head can be reduced in height by trimming the desired amount (not to exceed 2") from the bottom edge. There is a 3-degree bevel on the bottom edge of the head. When trimming, it is important to maintain this 3-degree bevel.

This head should be flashed to prevent water infiltration. The outside edge of the pilaster should align with the outside ends of the Sunburst Head.

Finishing: Although ATW EntryTRIM doesn't require a topcoat of finish we recommend one coat of 100% Acrylic Latex paint to insure years of lasting beauty.
